## Experts in Mass Timber

9 Projects

US\$1.3 billion

55% for repeat clients

We are leaders in mass timber construction, specialising in cross-laminated timber (CLT) and glue-laminated timber (glulam) projects that reduce embodied carbon and create long-term value.

Clients trust us to deliver high-quality, sustainable solutions with precision across procurement, shipping, and installation of materials.

We excel in value engineering and innovative buildability solutions and if engaged in an early contractor involvement (ECI) role we can positively influence the project upfront, even in the feasibility and concept stages.

By leveraging our extensive subcontractor and supplier network, we ensure the best procurement strategy for each project. Our strong partnerships with local and international mass timber suppliers allow us to tailor procurement solutions, optimising design, cost, and efficiency for every unique build.

Our expertise is demonstrated through landmark projects at La Trobe, Monash, and Murdoch Universities, including Gillies Hall—the first large-scale Passivhaus-certified building in the Southern Hemisphere.

Multiplex is backed by the financial stability and global relationships of parent company, Brookfield, a leading global investment firm with over US\$1trillion of assets under management.
